Crawler Companion Player Guide

Getting started

Crawler Companion saves to the character sheet PDF in Chrome and Edge. Firefox and Safari can open the sheet but cannot save to it.

1. Open `Crawler_Companion_v1.4.0.html` or the newest version.
2. Pick your floor at the top of the page.
3. In the Crawler section, click Link your PDF and choose your fillable character sheet. On later visits, click Reconnect.
4. Changes are listed under the sheet's name.
5. Click Save to sheet, or leave Save changes automatically ticked.

Reload reads the PDF again. The page also checks the PDF every few seconds for edits made elsewhere. Unlink disconnects the PDF without changing it. Without a linked sheet, data is kept in the browser. Hover over or tap an underlined number to see how it was calculated.

Updates

The version number and the Check for updates button are at the bottom of the page. If a newer version exists, it lists the changes and shows a Download button. Open the new file and click Reconnect. Settings carry over in Chrome and Edge. The page only contacts GitHub when the button is clicked. All versions are on the Releases page.

Your crawler

Each stat has an Unenhanced and an Enhanced value, as on the sheet. Unenhanced is base plus Race, Class, stat potions and level-ups. Enhanced adds gear, spells and buffs. Changing Unenhanced changes Enhanced by the same amount. Change Enhanced alone for temporary buffs. Equipping or removing gear updates Enhanced. Hovering over a Mod shows the gear portion.

The panel also holds Evade Buffs, Armor DR, DR Buffs, AI Favor, Level and Jumping Rank.

Calculated values: Evade (d20 + Dex Mod + Evade Buffs), DR, Health Bar (10 slots, each worth the Con Mod), Max Mana (Enhanced Int), hold breath and dying countdown (Con Mod in rounds), jump, lift and throw, the Popularity change from Charisma at the end of

the floor, and stat points from levels (spent in a saferoom from Floor 3).

Rolling, damage and healing

Check

Choosing a Skill or attack under From your sheet fills in the stat, Rank and target type. Rolling it ticks the Skill for advancement. Skill Check, Attack, Evade and Stat Check can also be set up by hand. Tick No Ranks for untrained rolls.

Tick injuries and Fatigue and set the target. The odds are shown before rolling. Enter the d20 result or click Roll for me. Reroll with AI Favor spends 1 AI Favor. The Other bonus resets when the roll type or Skill changes.

Damage

Choosing an attack builds the dice: base dice, extra base dice (such as Iron Punch's 1d2), stat Mod, flat bonus and the Rank die for weapon Skills. Choose Hit, Amazing Success or Critical Hit. Extra base dice double on a Critical Hit. The Rank die does not.

Health & Mana

Enter the damage, then set resistance, vulnerability or immunity, area attacks, and whether it came from a debuff. Debuff damage skips DR. The slots lost are shown before the hit is applied. Heal, Cast Heal (2 Mana) and Spend Mana are on the same tab.

A calm hour restores 1 slot and 5 Mana. A short rest (2 hours) restores 5 slots and half your Mana. A long rest (8 hours) restores all Health and Mana and clears Fatigued.

Dice

Buttons for d20, Advantage, Disadvantage, Help (1d2), Help or Intervene (1d6) and Call a Play (2d6), and a field for any expression such as `3d6+2`.

Skills

Each Skill is listed with its Rank, its roll bonus including gear, and its advancement tick. Roll sends the Skill to the Check tab. Skills can be added, edited and removed. The sheet holds 20.

Advancement

Each ticked Skill rolls a d20. A result equal to or above its Rank adds 1 Rank. The cap is 15, or 20 where your Race or Class allows it. Ticks clear afterwards.

- Every 2 hours rolls ticked Skills at Rank 4 or lower. Use it after each 2 hours of play.
- End of floor rolls all ticked Skills.

Humans can choose one Skill at Rank 9 or lower to roll with Advantage at the end of the floor.

Untrained Skills

Enter the Skill under Try a Skill you don't have, choose its stat and roll. Untrained rolls have Disadvantage and no Rank. On Floors 1 and 2 the Skill is added at Rank 0, and at the next 2-hour check you choose one tried Skill to learn at Rank 1. From Floor 3, trying a Skill does not teach it.

Grinding

Enter the hours, any map bonus and the Skills trained, then click Log the grind. A Skill rolls advancement when its grind hours reach its Rank. Each Skill can grind once per day. Up to 5 hours a day is safe. Each hour over 5 needs an Endurance check. Grind hours equal to your Level give 1 Level.

Grind hours and Skill settings are saved at the end of the Skill's notes on the sheet, for example `Grind 2 h; Adv +1; Max 20`.

Gear

Equipping an item adds its bonuses to Enhanced stats, Armor DR and Evade Buffs. Unequipping removes them.

Head, torso, arms, legs and feet hold one item each. Hands hold gloves, a main hand and an off hand. A two-handed item uses both hands and returns held items to the Inventory. Up to 10 accessories, with one belt and one cape.

Add an item takes a name, quantity, slot and bonuses. Skill bonuses are entered as `+2 Investigation, +1 Dodge`. Potions take a Use: heal slots, Mana, full Health or full Mana. Saved items go to the Inventory. Click Equip to wear one. The slot and bonuses are saved at the start of the item's notes on the sheet.

The sheet has 20 Inventory rows. Gold and Misc. Junk use two of them. The Inventory can be searched, sorted and filtered. Use drinks a potion and applies its healing or Mana.

Gold and Junk accept a total, or `+50` and `-20` to add or spend. Sell all junk converts Junk to Gold at 1 each. Loot them rolls the floor's gold and 1d6 Junk per body. Floor 1 Mobs drop no gold.

The Hotlist has 10 slots. Spells must be in the Hotlist to be cast in combat.

Loading from CrawlerForge

In CrawlerForge, open the crawler, go to Manage and click Export this Crawler. This saves a file such as `crawler-rob-20261105.json`. In Crawler Companion's Gear tab, click Load from CrawlerForge and choose the file.

The preview shows worn and carried items, unopened Loot Boxes, Gold, Junk and Hotlist. Untick anything to skip, then click Load it. Stats update by the gear bonuses. Loading the same file twice does not double anything.

- Gear slots that are empty in CrawlerForge keep what is on the sheet, unless the option to clear them is ticked.
- Items with no notes in CrawlerForge keep the sheet's notes for an item of the same name.
- Hotlist entries keep the sheet's wording when they start with the same name.
- The preview warns when items do not fit in 20 rows, and when the file has crafting or enchanting, which is not replayed.

Load from CrawlerForge also reads Export everything backups from Account (choose a crawler or the Forge) and pack files. For packs, tick the items and click Add to Inventory. Item effects with no matching field on the sheet, such as Move or extra damage, are written into the item's notes.

Loot Boxes

Unopened boxes appear as Inventory rows tagged Loot Box, with their contents listed. Boxes awarded by the GM in CrawlerForge come across with the crawler export. Boxes in a pack file are added by ticking them. Boxes already opened in CrawlerForge arrive as their contents, less any deity tithe.

Click Open on a box row. Choose the Skill or Stat for any "your pick" potion, then click Open it. Items go to the Inventory. Gold and Junk are rolled and added. Skill potions raise the Skill up to its cap. Stat potions raise Unenhanced and Enhanced. Skills the box teaches are added to the Skills list.

- A crawler can drink two Stat potions and two Skill potions in total (Core p. 226). A warning appears before a third.
- A box does not open if its contents do not fit in the Inventory.
- Random boxes from a pack file only roll their Gold. The GM rolls the rest. Boxes awarded in CrawlerForge are already rolled and open in full.
- By the rules, Loot Boxes are opened in a saferoom.

Pet and Notes

Pet

Enter a name and starting attitude and click Add a Level 1 pet. Fill in its stats, Level, DR, Evade, Move and Size, and choose a role: Tank, Aggressive or Utility.

The pet's Health Bar starts with slots equal to its Size and gains 1 slot per level, up to 10. Each slot holds its Con Mod. Pet attacks roll at Rank equal to the floor. Level up with the party levels the pet and shows the stat points to place. Command it to fight rolls Animal Handling against 10 + floor + the pet's Int Mod. Change its attitude rolls to move it between Hostile, Calm, Friendly and Bonded.

Name, attitude and role are saved at the start of the pet's Special box, for example `Jane, Bonded, Utility.` Mounts and vehicles are under Mount or vehicle. Mounts do not level.

Notes

Notes, Past Trauma, Loose Ends, Regrets and Popularity. More from your sheet holds kills, clubs, deity, racial and class abilities, sponsors and personal space. Lists take one entry per line. The number next to each box is how many lines the sheet holds. Long text is saved in full, but the PDF may only show the beginning.

Troubleshooting

These are stored in the browser, not the PDF: grind hours toward the next Level, unspent pet stat points, notes on worn items, full Loot Box contents and the potion count. On another computer, boxes open from the text in their notes.

- Changes do not save to the PDF: use Chrome or Edge.
- "Doesn't look like a CrawlerForge crawler, backup or pack": choose the `.json` file exported from CrawlerForge.
- Items missing after loading: the Inventory may be full. Make room and load again.
- "An item the pack no longer holds": the item must be in the same pack as the box.
- Stats look wrong after equipping: hover over the Mod to see the gear and buff amounts.
