Crawler Companion Player Guide

Nov 11, 2026 · @Rob

Getting started

I built Crawler Companion so we can stop doing math at the table and stop fighting with the PDF. It's the rules reference with your character sheet bolted on. Link your fillable sheet, and everything you change in here gets saved back into it.

Use Chrome or Edge. Firefox and Safari will open your sheet, but they can't save to it, so you'd be copying every change over by hand.

1. Open `Crawler_Companion_v1.4.0.html`, or whatever the newest version is.
2. Pick your floor at the top. Every yellow number on the page follows it.
3. Scroll down to the Crawler section, hit **Link your PDF** and choose your character sheet. Next time, **Reconnect** picks the same file back up.
4. Play. Every change shows up in the list under your sheet's name, like "Inventory: Gold 0 to 400".
5. Hit **Save to sheet** when you're done, or leave **Save changes automatically** ticked and forget about it.

Reload reads the PDF again, but the page checks it every few seconds anyway, so if you edit the PDF directly it notices. **Unlink** just disconnects and doesn't touch the file. You can also use the whole thing without a sheet; it keeps everything in your browser until you link one. And if you ever wonder where a number came from, hover over it (or tap it on a phone) and it shows the math.

Getting updates

You don't need to come back to GitHub for new versions. At the very bottom of the page there's the version number and a **Check for updates** button. If there's something newer, it tells you what changed and gives you a Download button. Open the new file instead of the old one and hit **Reconnect**. In Chrome and Edge your settings come along with you.

The page only talks to GitHub when you press that button. If you'd rather grab it yourself, the newest version is always on the Releases page.

Your crawler

This panel feeds every other tab, so keep it current.

Each stat has two numbers, same as the sheet. Unenhanced is your base plus Race, Class, stat potions and level-ups. Enhanced is that plus whatever gear, spells and buffs are doing for you right now. Raise Unenhanced and Enhanced goes up with it, so your gear bonuses don't get wiped. For a temporary buff, change Enhanced on its own.

Gear looks after itself. Equip something and Enhanced moves; take it off and it moves back. Hover over a Mod to see how much of it is coming from gear.

Under the stats are Evade Buffs, Armor DR, DR Buffs, AI Favor, Level and Jumping Rank. The worked-out numbers below those fill themselves in: Evade (d20 + Dex Mod + Evade Buffs), DR, your Health Bar (10 slots, each worth your Con Mod), Max Mana (your Enhanced Int), how long you can hold your breath and how long you've got when you're dying (both your Con Mod in rounds), how far you can jump, lift and throw, whether your Charisma gets you Popularity at the end of the floor, and how many stat points you've banked from levelling. You spend those in a saferoom once you're on Floor 3.

Rolling, damage and healing

Check

Pick a Skill or attack from the **From your sheet** dropdown and it fills in the stat, the Rank and what you're rolling against. Rolling it ticks the Skill for advancement, so you don't have to remember to. You can also set it up by hand as a Skill Check, Attack, Evade or Stat Check, and tick **No Ranks** if you're winging it untrained.

Tick any injuries or Fatigue you're carrying and set the target (Unopposed, a Stat check, or a foe or Mob). It shows your odds before you roll. Type in your d20 or let it roll for you, and if it goes badly, **Reroll with AI Favor** spends a point.

The Other bonus box clears itself when you switch roll types or pick a different Skill, so last round's +2 doesn't sneak into this one.

Damage

Pick the attack and it builds the dice for you: base dice, any extra base dice (like Iron Punch's 1d2), your stat Mod, a flat bonus, and the Rank die for weapon Skills. Choose Hit, Amazing Success or Critical Hit and it tells you what to roll and why. Extra base dice

double on a crit. The Rank die doesn't, which trips people up.

Health & Mana

Type in the damage, then tell it whether you resist it, you're vulnerable or immune, whether it was an area attack you dodged or got splashed by, and whether it came from a debuff (that one skips DR). It shows how many slots you're about to lose before you take the hit. Heal, Cast Heal (2 Mana) and Spend Mana are right there too.

For resting, a calm hour gives back 1 slot and 5 Mana, a short rest (2 hours) gives 5 slots and half your Mana, and a long rest (8 hours) tops everything off and clears Fatigued.

Dice

Quick buttons for a d20, Advantage, Disadvantage, Help (1d2), Help or Intervene (1d6) and Call a Play (2d6), plus a box for anything else, like `3d6+2`.

Skills

Every Skill on your sheet is listed here with its Rank, what you actually roll (gear included) and its advancement tick. **Roll** sends a Skill over to the Check tab. You can add, edit and remove Skills here too; the sheet has room for 20.

Advancement

Ticked Skills roll a d20 at advancement time, and if you roll your Rank or higher you go up one. The cap is 15, or 20 if your Race or Class lets that Skill go further. Ticks clear afterwards.

- After every 2 hours of play, hit **Every 2 hours**. That rolls ticked Skills at Rank 4 or lower.
- At the end of a floor, hit **End of floor**. That rolls all of them.

Humans get to roll one Skill at Rank 9 or less with Advantage at the end of the floor, and there's a dropdown to pick which.

Trying something you don't have

Type the Skill under **Try a Skill you don't have**, pick its stat and roll it. You get Disadvantage and no Rank. On Floors 1 and 2 the Skill goes on your sheet at Rank 0, and at the next 2-hour check you pick one of the Skills you tried to learn at Rank 1. From Floor 3 on, the dungeon stops being that generous.

Grinding

Put in your hours, any map bonus and which Skills you trained, then **Log the grind**. When a Skill's grind hours reach its Rank, it rolls advancement on the spot. Each Skill only grinds once a day. Five hours is safe, and every hour past that needs an Endurance check. Grind hours also count toward levelling: grind as many hours as your Level and you go up one.

The page saves grind hours and these extra Skill settings at the end of the Skill's notes on your sheet, like `Grind 2 h; Adv +1; Max 20`. Leave that bit alone and it keeps working.

Gear

This is the part I wanted most. Equip something and your Enhanced stats, Armor DR and Evade Buffs move by whatever the item gives you, and they move back when you take it off. No more doing that by hand.

Slots follow the book. Head, torso, arms, legs and feet get one item each. Hands are split into gloves, main hand and off hand, and a two-handed weapon takes both hands and drops whatever you were holding back into your Inventory. You can wear up to 10 accessories, but only one belt and one cape.

To add something, hit **Add an item** and give it a name, how many you have, which slot it goes in and what it does. Skill bonuses are written like `+2 Investigation, +1 Dodge`. Potions get a Use: heal slots, Mana, full Health or full Mana. On the sheet, the slot and bonuses get written at the start of the item's notes, so they come back next time. Save it, it lands in your Inventory, and then you can hit **Equip**.

Your sheet only has 20 Inventory rows, and Gold and Misc. Junk take two of them. You can search, sort and filter the list, and the minus and plus buttons change how many you've got. **Use** on a potion drinks it, heals you or restores Mana, and reminds you about Potion Sickness.

For Gold and Junk, type a new total, or `+50` to add and `-20` to spend. **Sell all junk** turns it into gold at 1 each. After a fight, put in how many bodies you're looting and hit **Loot them** to roll the floor's gold plus 1d6 junk per body. Floor 1 Mobs don't drop gold, sorry.

The Hotlist is your 10 quick slots. Spells have to be in here for you to cast them in combat.

Loading from CrawlerForge

If you keep your crawler in CrawlerForge, you don't have to type your gear in twice. In CrawlerForge, open your crawler, go to **Manage** and hit **Export this Crawler**. That gives you a file like `crawler-rob-20261105.json`. Then in Crawler Companion's Gear tab, hit **Load from CrawlerForge** and pick that file.

You get a preview first: what you're wearing, what you're carrying, any unopened Loot Boxes, your Gold, Junk and Hotlist. Untick anything you don't want brought over, then hit **Load it**. Your stats move by your gear bonuses exactly as if you'd equipped everything by hand, and loading the same file again won't double anything up.

It tries hard not to clobber your sheet. If CrawlerForge has nothing on your head, your sheet keeps whatever's there (there's a checkbox if you really do want it cleared). Notes you wrote on an item stay put if CrawlerForge doesn't have any. Hotlist entries keep your wording, so "Soul Collector: 4 Mana, 50 ft" doesn't get cut down to "Soul Collector".

Two limits. The sheet still only has 20 Inventory rows, so the preview warns you if something won't fit. And crafting and enchanting aren't replayed yet; it'll tell you if your file has any.

It also reads CrawlerForge's Export everything backup (under Account), where you pick which crawler or your Forge, and any pack file the GM sends. With a pack you just tick what you want and hit **Add to Inventory**. Anything an item does that the sheet has no box for, like Move or extra damage, goes into the item's notes so you don't lose it.

Loot Boxes

Loot Boxes come across from CrawlerForge unopened and sit in your Inventory until you open them.

When the GM awards you a box in CrawlerForge, it shows up there as waiting in your Gear. Leave it, export your crawler and load it like above. Each box becomes its own Inventory row with a Loot Box tag and a list of what's inside. If the GM sends a pack file instead, load that and tick the boxes. A box you already opened in CrawlerForge just comes across as whatever was in it, minus any tithe your god took.

To open one, hit **Open** on its row. If there's a Skill or Stat potion that says "your pick", you choose which one right there in the panel (you can even type in a Skill you don't have yet). Then hit **Open it**. Items go into your Inventory ready to equip, Gold and Junk get rolled and

added, Skill potions raise that Skill up to its cap, Stat potions raise both Unenhanced and Enhanced, and if the box teaches a Skill it goes on your Skills list. Anything else in the box shows up in the message.

A few things to know:

- The book only lets a crawler drink two Stat potions and two Skill potions, ever (Core p. 226). It'll warn you before a third but won't stop you.
- If your Inventory can't fit what's inside, nothing happens until you make room.
- A random box from a pack file only gives you its Gold here, and the GM rolls the rest. Boxes the GM awards in CrawlerForge are already rolled, so those open in full.
- By the book, you're supposed to open these in a saferoom.

Pet and Notes

Pet

If you've got a pet, give it a name and a starting attitude and hit **Add a Level 1 pet**. Then fill in its stats, Level, DR, Evade, Move and Size, and pick its role: Tank, Aggressive or Utility.

Its Health Bar starts with as many slots as its Size and gains one a level, up to 10, each slot worth its Con Mod. It gets two attack boxes, and pet attacks roll at Rank equal to the floor. **Level up with the party** levels it and tells you how many stat points to place. **Command it to fight** rolls your Animal Handling against 10 + floor + its Int Mod, and **Change its attitude** tries to move it along from Hostile to Calm to Friendly to Bonded.

The sheet doesn't have boxes for a pet's name, attitude or role, so those get saved at the start of its Special box, like `Jane, Bonded, Utility.` Mounts and vehicles are under **Mount or vehicle** with their own Health Bar. Mounts don't level.

Notes

Notes, Past Trauma, Loose Ends, Regrets and Popularity are all here, and **More from your sheet** has your kills, clubs, deity, racial and class abilities, sponsors and personal space. Lists are one entry per line, and the number next to a box is how many lines the PDF has room for. Long notes still save in full, but your PDF reader might only show the start.

If something's off

Almost everything lives in your PDF, so the PDF is basically your save file. A few things only live in your browser: grind hours toward your next level, unspent pet stat points, your notes on an item while you're wearing it, the full contents of your Loot Boxes, and how many potions you've drunk. If you switch computers you lose those, although boxes still open from what's written on the sheet.

If changes won't save to the PDF, you're probably in Firefox or Safari, so switch to Chrome or Edge. If it says your file doesn't look like CrawlerForge, you picked the PDF or something else; you want the `.json` file CrawlerForge exported.

If something's missing after loading, check whether your Inventory hit 20 rows. The preview warns you about that, so make room and load again. If a box item says "An item the pack no longer holds", let me or the GM know, because the item needs to be in the same pack as the box.

And if your stats look wrong after equipping something, hover over the Mod. It shows how much is coming from gear and how much from buffs.
